### Permit Authority

This permit (a) is issued according to the “Rules for the Control of Air Pollution in Idaho” (Rules), IDAPA 58.01.01.200–228; (b) pertains only to emissions of air contaminants regulated by the State of Idaho and to the sources specifically allowed to be constructed or modified by this permit; (c) has been granted on the basis of design information presented with the application; (d) does not affect the title of the premises upon which the equipment is to be located; (e) does not release the permittee from any liability for any loss due to damage to person or property caused by, resulting from, or arising out of the design, installation, maintenance, or operation of the proposed equipment; (f) does not release the permittee from compliance with other applicable federal, state, tribal, or local laws, regulations, or ordinances; and (g) in no manner implies or suggests that the Idaho Department of Environmental Quality (DEQ) or its officers, agents, or employees assume any liability, directly or indirectly, for any loss due to damage to person or property caused by, resulting from, or arising out of design, installation, maintenance, or operation of the proposed equipment. Changes in design, equipment, or operations may be considered a modification subject to DEQ review in accordance with IDAPA 58.01.01.200–228.

### Date Issued
March 2, 2022

3. Asphalt Production Equipment .............................................................................................. 7
4. General Provisions .................................................................................................................. 13
1 Permit Scope

Purpose

1.1 This is a modified permit to construct (PTC) for Valley Paving and Asphalt, Inc. to reduce the allowable production rate from 7,200 tons of hot mix asphalt to 4,872 tons of hot mix asphalt per any consecutive 24-hour period.

1.2 Those permit conditions that have been modified or revised by this permitting action are identified by a date citation located directly under the permit condition and on the right-hand margin.

1.3 This PTC replaces Permit to Construct No. P-2009.0118, issued on October 15, 2009, the terms and conditions of which shall no longer apply.

Regulated Sources

Table 1.1 lists all sources of regulated emissions in this permit.

2 Facility-Wide Conditions

Fugitive Dust Control

2.1 Reasonable Control of Fugitive Emissions

In accordance with IDAPA 58.01.01.650-651, all reasonable precautions shall be taken to prevent particulate matter from becoming airborne. Some of the reasonable precautions may include, but are not limited to:

- Application of Dust Suppressants: Application, where practical, of asphalt, oil, water or suitable chemicals to, or covering of dirt roads, material stockpiles, and other surfaces which can create dust.
- Use of Control Equipment: Installation and use, where practical, of hoods, fans and fabric filters or equivalent systems to enclose and vent the handling of dusty materials. Adequate containment methods should be employed during sandblasting or other operations.
- Covering of Trucks: Covering, when practical, open bodied trucks transporting materials likely to give rise to airborne dusts.
- Paving: Paving of roadways and their maintenance in a clean condition, where practical.

The permittee shall monitor and maintain records of the frequency and the method(s) used (e.g., water, chemical dust suppressants) to reasonably control fugitive dust emissions.

The permittee shall maintain records of all fugitive dust complaints received. The permittee shall take appropriate corrective action as expeditiously as practicable after receipt of a valid complaint. The records shall include, at a minimum, the date that each complaint was received and a description of the following: the complaint, the permittee’s assessment of the validity of the complaint, any corrective action taken, and the date the corrective action was taken.

The permittee shall conduct a monthly facility-wide inspection of potential sources of fugitive dust emissions, during daylight hours and under normal operating conditions to ensure that the methods used to reasonably control fugitive dust emissions are effective. If fugitive dust emissions are not being reasonably controlled, the permittee shall take corrective action as expeditiously as practicable. The permittee shall maintain records of the results of each fugitive dust emissions inspection. The records shall include, at a minimum, the date of each inspection and a description of the following: the permittee's assessment of the conditions existing at the time fugitive emissions were present (if observed), any corrective action taken in response to the fugitive dust emissions, and the date the corrective action was taken. The monthly inspection is not required when the facility is not in operation. Records of each facility-wide fugitive emissions inspection shall remain on-site for the most recent five-year period and shall be made available to DEQ representatives upon request.
Relocation Requirements

2.2 Collocation Restrictions

This asphalt plant shall not locate within 1,000 feet (± 6 feet) of a rock crushing plant, any other asphalt plant, or a concrete batch plant.

2.3 Relocation Requirements

In accordance with IDAPA 58.01.01.500, at least 10 days prior to relocating any of the permitted equipment, the permittee shall submit a completed DEQ Portable Equipment Relocation Form (PERF) to the following address, e-mail, or fax number:

PERF Processing Unit
DEQ – Air Quality
1410 N. Hilton
Boise, ID 83706-1255
Ph.: (208) 373-0502
E-mail to: aqperf@deq.idaho.gov
Fax: (208) 373-0340

Non-attainment Area Operations

2.4 Non-attainment Area Operations

The permittee shall not move and operate any equipment authorized by this permit to any air quality non-attainment area in the State of Idaho.

Odors

2.5 Odors

The permittee shall not allow, suffer, cause, or permit the emission of odorous gases, liquids, or solids into the atmosphere in such quantities as to cause air pollution in accordance with IDAPA 58.01.01.776.01.

2.6 Odor Management Plan

The permittee shall maintain an Odor Management Plan that describes the methods and procedures that will be used and followed when waste oil is used as fuel to comply with the Odors Permit Condition.

- The odor management plan shall include detailed information including, but not limited to, the use of odor control technology.
  - The permittee shall install or integrate odor control technology to control odors from the hot-mix asphalt plant, unless DEQ gives written approval for an alternative. Use of any odor control technology shall be consistent with the manufacturer’s specifications and recommendations into the Odor Management Plan.
  - The permittee shall maintain a copy of the operating specifications and manufacturer recommendations for the odor control technology, and shall incorporate these operating specifications and recommendations into the Odor Management Plan.

- The Odor Management Plan shall include manufacturer recommendations and specifications for any odor control equipment used.

- The Odor Management Plan, including all additions and revisions thereto, shall remain on site at all times and shall be made available to DEQ representatives upon request.
Once developed, a copy of the Odor Management Plan shall be submitted for review and comment to DEQ’s Boise Regional Office at the following address:

Air Quality Permit Compliance  
Department of Environmental Quality  
Boise Regional Office  
1445 N. Orchard  
Boise, ID 83706

**Monitoring and Recordkeeping Requirements**

**2.7 Odor Complaints**

The permittee shall maintain records of all odor complaints received to demonstrate compliance with the Odors permit condition. The permittee shall take appropriate corrective action as expeditiously as practicable. The records shall include, at a minimum, the date each complaint was received and a description of the following: the complaint, the permittee’s assessment of the validity of the complaint, any corrective action taken, and the date the corrective action was taken.

The permittee shall submit semiannual reports to DEQ’s Boise Regional Office by January 15 and July 15 of each year summarizing the occurrences or nonoccurrences of odor complaints and the corrective actions taken in response to the complaints.

**2.8 Recordkeeping**

All monitoring and recordkeeping documentation required by this permit shall be maintained in accordance with the Recordkeeping general provision.
3 Asphalt Production Equipment

Process Description

3.1 Process Description
Asphalt is made at the facility as follows. First, stockpiled aggregate and sand are transferred to feed bins. The Applicant has also requested that recycled asphalt pavement (RAP) be used in the aggregate. Aggregate is then dispensed from the feed bins onto feeder conveyors, which transfer the aggregate to the 70 MMBtu/hr oil-fired asphalt drum mix dryer. The Applicant has requested that the asphalt drum mixer be fired on #2 diesel fuel and used oil (RFO). Next, aggregate travels through the rotating drum mixer, and when dried and heated, it is mixed with hot liquid asphaltic oil. The asphaltic oil is heated by the asphalt tank heater to allow it to flow and be mixed with the hot, dry aggregate. The resulting asphalt is conveyed to hot storage bins until it can be loaded into trucks for transport off site or transferred to silos for temporary storage prior to transport off-site.

Electrical power for the plant is provided by the local electric utility.

3.2 Control Device Descriptions
Particulate matter (PM) emissions from the hot-mix asphalt (HMA) drum dryer are controlled by a wet venturi scrubber.

Emission Limits

3.3 Emission Limits
PM$_{10}$ emissions from the drum dryer stack shall not exceed 8.0 pounds per hour (lb/hr) and 3.73 tons per year (T/yr).

3.4 40 CFR 60, Subpart I – Standard for Particulate Matter
In accordance with 40 CFR 60.92, the emissions from the asphalt drum mixer baghouse stack shall not exceed:

- Particulate matter in excess of 0.04 gr/dscf (90 mg/dscm)
- 20% opacity

3.5 Opacity Limit
Visible emissions from any stack, vent, or other functionally equivalent opening shall not exceed 20% opacity for a period or periods aggregating more than three minutes in any 60-minute period as required by IDAPA 58.01.01.625. Opacity shall be determined by the procedures contained in IDAPA 58.01.01.625.

Operating Requirements

3.6 Asphalt Production Limits
Asphalt production from this facility shall not exceed the following limits:

- 300 tons per hour
- 4,872 tons per day
- 280,000 tons per consecutive 12-months

[3/2/2022]
3.7 **Wet Venturi Scrubber Monitoring Equipment**

The permittee shall, in accordance with manufacturer specifications, install, calibrate, maintain, and operate equipment to continuously measure the pressure differential across the wet venturi scrubber and the scrubbing-media flow rate to the wet venturi scrubber.

3.8 **Wet Venturi Scrubber Operations and Maintenance Manual**

The permittee shall maintain an operations and maintenance (O&M) manual for the wet venturi scrubber, which describes the procedures that will be followed to comply with General Provision 2 of this permit, the manufacturer’s specifications, and all other permit requirements for the wet venturi scrubber. The manual shall remain on site at all times and shall be made available to DEQ representatives upon request. Once developed, a copy of the manual shall be submitted for review and comment to DEQ’s Boise Regional Office at the following address:

Air Quality Permit Compliance  
Department of Environmental Quality  
Boise Regional Office  
1445 N. Orchard McCall, ID 83638

The O&M manual shall include, but not be limited to, the following:

- Be based on manufacturer’s information to the extent practical. When the manufacturer’s information is not used, other supporting information such as operating parameters measured during a successful performance test shall be included in the manual.

- List the manufacturer’s recommended pressure drop operating range and scrubbing media flow rate range for effective PM emissions control for the wet venturi scrubber.

- Include an inspection checklist that lists the scrubber components that will be inspected when the wet venturi scrubber is taken out of operation and physically inspected (e.g., condition of water spray nozzles, condition of seals, scrubbing media flow meter, etc.).

- Include the frequency that the physical inspections are to occur.

- Include a record of the results of each inspection and any corrective action taken in response to the results of the inspection.

3.9 **Wet Venturi Scrubber Pressure Drop**

The pressure drop across the wet venturi scrubber shall be maintained within manufacturer and O&M manual specifications.

3.10 **Wet Venturi Scrubber Flow Rate**

The scrubbing-media flow rate to the wet venturi scrubber shall be maintained within manufacturer and O&M manual specifications.

3.11 **Wet Venturi Scrubber Operation**

The wet venturi scrubber shall be operated at all times during the operation of the drum dryer.

**Fuel Specifications**

3.12 **Asphalt Drum Mixer Fuel Specifications**

The asphalt drum mixer shall only combust the following fuels:
• Distillate fuel oil which meets ASTM Grades 1 or 2, or a mixture of ASTM Grades 1 and 2, the sulfur content of the distillate fuel supplied to the drum dryer shall not exceed 0.3% by weight if ASTM Grade 1 fuel oil is used, or 0.5% by weight if ASTM Grade 2 fuel is used.

• Used Oil, the sulfur content shall not exceed 0.5% by weight.

In accordance with 40 CFR 279.11, with the exception of total halogens which are limited to 1,000 parts per million (ppm), used oil (as defined by ASTM D6488) shall be limited to RFO4, RFO5L, and RFO5H, and shall not exceed any of the allowable levels of the constituents or properties listed in the following table:

<table>
<thead>
<tr>
<th>Constituent/Property</th>
<th>Allowable Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>Arsenic</td>
<td>5 ppm</td>
</tr>
<tr>
<td>Cadmium</td>
<td>2 ppm</td>
</tr>
<tr>
<td>Chromium</td>
<td>10 ppm</td>
</tr>
<tr>
<td>Lead</td>
<td>100 ppm</td>
</tr>
<tr>
<td>Sulfur</td>
<td>5,000 ppm (0.5% by weight)</td>
</tr>
<tr>
<td>Flash Point</td>
<td>A minimum of 100 °F</td>
</tr>
<tr>
<td>Total Halogens(b)</td>
<td>1,000 ppm</td>
</tr>
<tr>
<td>PCBs(c)</td>
<td>&lt; 2 ppm</td>
</tr>
</tbody>
</table>

a) The specification does not apply to mixtures of used oil and hazardous waste that continue to be regulated as hazardous waste (see 40 CFR 279.10(b)).

b) Used oil containing more than 1,000 parts per million (ppm) total halogens is presumed to be a hazardous waste under the rebuttable presumption provided under § 279.10(b)(1). Such used oil is subject to subpart H of part 266 of this chapter rather than 40 CFR 279 when burned for energy recovery unless the presumption of mixing can be successfully rebutted (see § 279.11).

c) Applicable standards for the burning of used oil containing PCB are imposed by 40 CFR 761.20(c).

3.13 Hot-Mix Asphalt Operating Hours

The maximum operating hours for the asphalt plant shall not exceed 1,400 hours per any consecutive 12-month period.

Performance Testing Requirements

3.14 PM<sub>2.5</sub> and Opacity Performance Testing

Performance testing on the asphalt drum mixer baghouse stack shall be performed within 180 days of permit issuance and no less than once every five years following the date of each test.

The performance test shall measure the PM<sub>10</sub> emission rate in pounds per hour, PM emissions rate in grains per dry standard cubic foot, and the opacity to demonstrate compliance with the Emissions Limit, 40 CFR 60, Subpart I – Standard for Particulate Matter, and Opacity Limit permit conditions.

The performance test shall be conducted under worst-case normal operating conditions and in accordance with IDAPA 58.01.01.157, and Performance Testing General Provision of this permit. The permittee is encouraged to submit a performance testing protocol for approval 30 days prior to conducting the performance tests.

3.15 PM<sub>2.5</sub> and Opacity Performance Testing Methods and Procedures

The permittee shall use EPA Methods 5 and 202, or EPA Methods 201A and 202, or such comparable and equivalent methods approved in accordance with Subsection 157.02.d, to determine compliance with the Emissions Limit permit condition.
The permittee shall use EPA Method 9 to determine compliance with the Opacity Limit permit condition with the method of calculating opacity exceedances altered in accordance with IDAPA 58.01.01.625.04.

3.16 Performance Test Monitoring and Recordkeeping

The permittee shall monitor and record the following during each performance test:

- The asphalt production rate, in tons per hour,
- The burner fuel type (i.e., distillate fuel oil or used oil),
- The burner fuel flow rate (i.e., gallons per hour),
- The fuel oil sulfur content (i.e., percent by weight),
- The pressure drop across the wet venturi scrubber (i.e., inches of water),
- The water flow rate to the wet venturi scrubber (i.e., gallons per minute),
- The visible emissions observed during the performance tests.

Monitoring and Recordkeeping Requirements

3.17 Asphalt Production Recordkeeping

For each day that the asphalt drum mixer is operated the Permittee shall maintain the following records:

- The amount of asphalt produced in tons per hour and tons per day to demonstrate compliance with the hourly and daily Asphalt Production Limits permit conditions.

Monthly asphalt production shall be determined by summing daily production over the previous calendar month. Consecutive 12-months of asphalt production shall be determined by summing the monthly production over the previous consecutive 12-month period to demonstrate compliance with the consecutive 12-months Asphalt Production Limits permit condition.

3.18 Operating Hours Recordkeeping

The Permittee shall record the operating hours of the hot mix asphalt plant while asphalt is being produced in hours per month and hours per year. Monthly asphalt production shall be determined by summing daily production over the previous calendar month. Consecutive 12-months of asphalt production shall be determined by summing the monthly production over the previous consecutive 12-month period to demonstrate compliance with the consecutive 12-months Hot-Mix Asphalt Operating Hours permit condition.

3.19 Wet Scrubber System Monitoring

The permittee shall monitor and record the scrubber media flow rate and the pressure drop across the wet scrubber at least once per day when the system is operating (for any day that asphalt is produced), to demonstrate compliance with the Wet Venturi Scrubber Pressure Drop and Wet Venturi Scrubber Flow Rate permit conditions.

3.20 Fuel Oil Specifications Recordkeeping

On an as-received basis for each shipment of distillate fuel oil, the permittee shall maintain the following supplier verified and certified information:

- ASTM grade
- Percent sulfur content by weight
3.21 Used Oil Certification Recordkeeping

On an as-received basis for each shipment of used oil, the permittee shall maintain the following supplier verified and certified information:

- The name and address of the used oil supplier.
- The measured concentration, expressed as ppm, of Arsenic, Cadmium, Chromium, Lead, Sulfur, Total Halogens, and PCBs, or a certification statement from the used oil supplier that the shipment meets the used oil specifications in the Asphalt Drum Mixer Fuel Specifications permit condition.
- The flashpoint expressed as degrees Fahrenheit.
- The analytical method, or methods, used to determine the concentration of each constituent and the flash point.
- The date and location of each sample.
- The date of each certification analysis.

3.22 Recordkeeping

All monitoring and recordkeeping documentation required by this permit shall be maintained in accordance with the Recordkeeping general provision.

Reporting Requirements

3.23 Performance Test Reporting

Performance test reports shall include records of the monitoring and recordkeeping required by the Performance Test Monitoring and Recordkeeping permit condition, and documentation that the performance test was conducted in accordance with the Initial 40 CFR 60, Subpart I – Standard for Particulate Matter Performance Test and the Periodic PM\textsubscript{2.5} Performance Testing permit conditions. Performance test reports shall be submitted by the permittee to the following address:

Air Quality Permit Compliance  
Department of Environmental Quality  
Boise Regional Office  
1455 N. Orchard  
Boise, ID 83706

Phone: (208) 373-0550  
Fax: (208) 373-0287

Incorporation of Federal Requirements by Reference

Unless expressly provided otherwise, any reference in this permit to any document identified in IDAPA 58.01.01.107.03 shall constitute the full incorporation into this permit of that document for the purposes of the reference, including any notes and appendices therein. Documents include, but are not limited to:

- Standards of Performance of New Stationary Sources (NSPS), 40 CFR 60, Subpart I – Standards of Performance for Hot Mix Asphalt Plants.
For permit conditions referencing or cited in accordance with any document incorporated by reference (including permit conditions identified as NSPS), should there be any conflict between the requirements of the permit condition and the requirements of the document, the requirements of the document shall govern, including any amendments to that regulation.
4 General Provisions

General Compliance

4.1 The permittee has a continuing duty to comply with all terms and conditions of this permit. All emissions authorized herein shall be consistent with the terms and conditions of this permit and the “Rules for the Control of Air Pollution in Idaho.” The emissions of any pollutant in excess of the limitations specified herein, or noncompliance with any other condition or limitation contained in this permit, shall constitute a violation of this permit, the “Rules for the Control of Air Pollution in Idaho,” and the Environmental Protection and Health Act (Idaho Code §39-101, et seq.)

[Idaho Code §39-101, et seq.]

4.2 The permittee shall at all times (except as provided in the “Rules for the Control of Air Pollution in Idaho”) maintain in good working order and operate as efficiently as practicable all treatment or control facilities or systems installed or used to achieve compliance with the terms and conditions of this permit and other applicable Idaho laws for the control of air pollution.

[IDAPA 58.01.01.211]

4.3 Nothing in this permit is intended to relieve or exempt the permittee from the responsibility to comply with all applicable local, state, or federal statutes, rules, and regulations.

[IDAPA 58.01.01.212.01]

Inspection and Entry

4.4 Upon presentation of credentials, the permittee shall allow DEQ or an authorized representative of DEQ to do the following:

- Enter upon the permittee’s premises where an emissions source is located, emissions-related activity is conducted, or where records are kept under conditions of this permit;
- Have access to and copy, at reasonable times, any records that are kept under the conditions of this permit;
- Inspect at reasonable times any facilities, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under this permit; and
- As authorized by the Idaho Environmental Protection and Health Act, sample or monitor, at reasonable times, substances or parameters for the purpose of determining or ensuring compliance with this permit or applicable requirements.

[Idaho Code §39-108]

Construction and Operation Notification

4.5 This permit shall expire if construction has not begun within two years of its issue date, or if construction is suspended for one year.

[IDAPA 58.01.01.211.02]

4.6 The permittee shall furnish DEQ written notifications as follows:

- A notification of the date of initiation of construction, within five working days after occurrence; except in the case where pre-permit construction approval has been granted then notification shall be made within five working days after occurrence or within five working days after permit issuance whichever is later;
- A notification of the date of any suspension of construction, if such suspension lasts for one year or more; and
- A notification of the initial date of achieving the maximum production rate, within five working days after occurrence - production rate and date.

[IDAPA 58.01.01.211.01]

- A notification of the anticipated date of initial start-up of the stationary source or facility not more than sixty days or less than thirty days prior to such date; and
- A notification of the actual date of initial start-up of the stationary source or facility within fifteen days after such date.

[IDAPA 58.01.01.211.03]

Performance Testing

4.7 If performance testing (air emissions source test) is required by this permit, the permittee shall provide notice of intent to test to DEQ at least 15 days prior to the scheduled test date or shorter time period as approved by DEQ. DEQ may, at its option, have an observer present at any emissions tests conducted on a source. DEQ requests that such testing not be performed on weekends or state holidays.

4.8 All performance testing shall be conducted in accordance with the procedures in IDAPA 58.01.01.157. Without prior DEQ approval, any alternative testing is conducted solely at the permittee’s risk. If the permittee fails to obtain prior written approval by DEQ for any testing deviations, DEQ may determine that the testing does not satisfy the testing requirements. Therefore, at least 30 days prior to conducting any performance test, the permittee is encouraged to submit a performance test protocol to DEQ for approval. The written protocol shall include a description of the test method(s) to be used, an explanation of any or unusual circumstances regarding the proposed test, and the proposed test schedule for conducting and reporting the test.

4.9 Within 60 days following the date in which a performance test required by this permit is concluded, the permittee shall submit to DEQ a performance test report. The written report shall include a description of the process, identification of the test method(s) used, equipment used, all process operating data collected during the test period, and test results, as well as raw test data and associated documentation, including any approved test protocol.

[IDAPA 58.01.01.157]

Monitoring and Recordkeeping

4.10 The permittee shall maintain sufficient records to ensure compliance with all of the terms and conditions of this permit. Monitoring records shall include, but not be limited to, the following: (a) the date, place, and times of sampling or measurements; (b) the date analyses were performed; (c) the company or entity that performed the analyses; (d) the analytical techniques or methods used; (e) the results of such analyses; and (f) the operating conditions existing at the time of sampling or measurement. All monitoring records and support information shall be retained for a period of at least five years from the date of the monitoring sample, measurement, report, or application. Supporting information includes, but is not limited to, all calibration and maintenance records, all original strip-chart recordings for continuous monitoring instrumentation, and copies of all reports required by this permit. All records required to be maintained by this permit shall be made available in either hard copy or electronic format to DEQ representatives upon request.

[IDAPA 58.01.01.211]
Excess Emissions
4.11 The permittee shall comply with the procedures and requirements of IDAPA 58.01.01.130–136 for excess emissions due to start-up, shut-down, scheduled maintenance, safety measures, upsets, and breakdowns.

[IDAPA 58.01.01.130–136]

Certification
4.12 All documents submitted to DEQ—including, but not limited to, records, monitoring data, supporting information, requests for confidential treatment, testing reports, or compliance certification—shall contain a certification by a responsible official. The certification shall state that, based on information and belief formed after reasonable inquiry, the statements and information in the document(s) are true, accurate, and complete.

[IDAPA 58.01.01.123]

False Statements
4.13 No person shall knowingly make any false statement, representation, or certification in any form, notice, or report required under this permit or any applicable rule or order in force pursuant thereto.

[IDAPA 58.01.01.125]

Tampering
4.14 No person shall knowingly render inaccurate any monitoring device or method required under this permit or any applicable rule or order in force pursuant thereto.

[IDAPA 58.01.01.126]

Transferability
4.15 This permit is transferable in accordance with procedures listed in IDAPA 58.01.01.209.06.

[IDAPA 58.01.01.209.06]

Severability
4.16 The provisions of this permit are severable, and if any provision of this permit to any circumstance is held invalid, the application of such provision to other circumstances, and the remainder of this permit, shall not be affected thereby.

[IDAPA 58.01.01.211]
