Paula,

Field burning is a major health hazard. There needs to be stronger restrictions on field burning criteria. Currently, it appears, any desired field burn is approved during the DEQ field burn time frames. Grass burning is one thing and other crop residue burning is another thing.

Stop this health hazard nonsense. Find other solutions to farm land management. Air quality is so important to all. I'm not opposed to farming, I'm opposed to air pollution field burning.

thank you for your consideration,

Jim Rehder
