There a number of alternatives to uncontrolled burning of slash.
BAT needs to be used!!!!

1. Burning small elevated piles.
2. Fires completely out by dusk
3. Monitors in closed airsheds such as Hayden Lake or no burning
4. Mulching, Chipping, hauling to the dump
5. CoGen Plant
6. Air Curtain Incinerators
7. Permits year round
8. Separate permits for each person burning
9. All burns monitored while burning
10. No smoldering
11. Opacity standards
12. Minimum temperature burns
13. Requirements on removal of vegetation, health of trees on ALL lots & acreage
14. Max moisture content

BAT is required by law on cars, wood stoves, heating systems, insulation, construction, snowmobiles, smoking.
Should be for outdoor slash eradication as well!!!!

We need to stop being ostriches and realize we are Seriously polluting our air & water and more importantly, we are seriously harming our childrens lungs!!

There are Alternatives!!
And much healthier for the land, water air & people.

At very least;

1. Fires completely out at dusk
2. Elevated piles
3. 24/7 monitoring
4. Opacity limits so no endless smoking piles loaded on all day long
5. Minimum -year drying of piles before burning
