Things to consider, as we move forward. Please.

New Re Use permits , that remove or reduce river source point pollution, By moving volume away from the river, due to new requirements that require cleaner river discharge, will not be issued if not cleaned to the highest quality, or a min of the river source point quality now required, if the bypass is only being used to avoid a higher standard of discharge requirements, and the re-use of lower quality is returning to the river down the line after bypassing requirements.

We can not be successful in improving the river quality, if these bypasses are exploited.

I think this should be a rule.

I also feel that re-use should only be allowed, where it is proven that the reuse improves the body of water it is entering, and above all does no harm. We need to preserve those areas that have not yet been exposed to a level of pollution as much as elsewhere, not intend to pollute everywhere without exception.(Class A Irrigation needs higher standards to be compatible in cleaner areas, or clean areas should not use class A irrigation if it leaves the area worse than it was before the application.)

I am also very concerned about re use in porous canals that recharge our aquifers and irrigate in areas of shallow ground water, as it has the potential to pollute the aquifer, and artesian wells, that are testing clean now , and we hope to keep clean.

I am sure you would word it differently, in the rules, but I am glad to have the opportunity to share this info, while you are considering the very important rules that effect so many, hopefully for the betterment of the environment.

Thank You,
Sincerely,
Judy Dahl

Life is what you make it, Have a great day! :)
